## Technical manual

### ■ WATER COOLED HEAT PUMP REVERSIBLE WATER SIDE

Cooling capacity 652.3 ÷ 2349.3 kW

Heating capacity 726.4 ÷ 2610.0 kW

**AERMEC**  
The AERMEC logo consists of the word "AERMEC" in a bold, black, sans-serif font. Below it is a stylized graphic of three green wavy lines of varying lengths, suggesting motion or air flow.

*Dear Customer,*

*Thank you for wanting to learn about a product Aermec. This product is the result of many years of experience and in-depth engineering research, and it is built using top quality materials and advanced technologies.*

*The manual you are about to read is meant to present the product and help you select the unit that best meets the needs of your system.*

*However, please note that for a more accurate selection, you can also use the Magellano selection program, available on our website.*

*Aermec Aermec, always attentive to the continuous changes in the market and its regulations, reserves the right to make all the changes deemed necessary for improving the product, including technical data.*

*Thank you again.*

*AERMEC S.p.A.*

#### CERTIFICATIONS

#### COMPANY CERTIFICATIONS

#### SAFETY CERTIFICATIONS

This marking indicates that this product should not be disposed with other household wastes throughout the EU. To prevent possible harm to the environment or human health from uncontrolled disposal of Waste Electrical and Electronic Equipment (WEEE), please return the device using appropriate collection systems, or contact the retailer where the product was purchased. Please contact your local authority for further details. Illegal dumping of the product by the user entails the application of administrative sanctions provided by law.

# EC DECLARATION OF CONFORMITY

AERMEC S.p.A.  
Via Roma, 996 - 37040 Bevilacqua (VR) - Italy

## WFN

MODEL	_____
SERIAL NUMBER	_____
DATE	_____

We, the undersigned, hereby declare under our own responsibility that the assembly in question, defined as follows:

**Name: WFN**  
**Type: Water cooled heat pump reversible water side**

**Models: WFN\_2007\_CO**

to which this declaration refers, complies with all the provisions related to the following directives:

**Machinery Directive 2006/42/EC**  
**ErP Directive 2009/125/CE**  
**RoHS Directive on the restriction of the use of certain hazardous substances in EEE: 2011/65/UE**  
**PED Directive regarding pressurised devices: 2014/68/UE**  
**Electromagnetic Compatibility Directive EMCD: 2014/30/UE**

The above-mentioned declaration complies with the harmonised European standards:

**UNI EN 378-2: 2017**  
**UNI EN ISO 12100: 2010**  
**CEI EN 61000-6-4: 2007**  
**CEI EN 61000-6-2: 2006**  
**UNI EN 12735-1: 2016**  
**CEI EN 60204-1: 2018**

This declaration of conformity has been released under the exclusive responsibility of the manufacturer.  
The person authorised to draw up the technical file is Luca Martin.

The unit complies with the project data indicated in the technical file in the paragraph Definition of the Assembly, is in agreement with Directive 2014/68/EU and satisfies the Total Guarantee procedure (form H1) with certificate no. 09/021-QT6704 Rev.7 issued by the notified body no. 1131 CEC via Pisacane 46 Legnano (MI) - Italia.  
The list of critical components relevant to the above factory number, in accordance with the provisions of Directive 2014/68/EU, is provided together with this Declaration of Conformity (doc. "List of components for Declaration of Conformity").

We also declare that, at the time this preloaded equipment was placed on the European market by Aermec S.p.A. (which imports or manufactures in the Union), the hydrofluorocarbons contained therein are considered in the unit system of the Union referred to in Chapter IV of EU Regulation 517/2014 as they were placed on the market by a manufacturer or importer of hydrofluorocarbons to which Article 15 of EU Regulation 517/2014 applies.

Signed for and on behalf of: AERMEC S.p.A.

Bevilacqua (VR),

*Marketing manager  
Luigi Zucchi*

# 1 PRODUCT DESCRIPTION

The heat pump for interiors, WFN from the new series, hydraulic side reversible, was designed to conjugate high efficiency levels and minimal encumbrance. Thanks to the 12 available sizes, it allows to cover a power interval from 652 kW to 2610 kW, satisfying typical air-conditioning needs in residential, commercial complexes or for the refrigeration of industrial processes.

## FIELDS OF THE RANGE

All the sizes of the series WFN are made up by a bracket structure, with galvanised steel bearing elements with RAL 9003 polyester paint. The accurate selection and assembly of the components provides a compact design, offering a greater ease of installation in new and pre-existing systems. According to their size, the units are available with 2 or 3 cooling circuits, studied to provide the maximum yield in nominal and partial load conditions, also guaranteeing the redundancy and continuity of operation in case of a circuit stop. All units are equipped with screw compressor, with minimum adjustment step equal to 25% and shell and tube exchangers both on the user and source side, characterised by pressure drops and copper pipes configuration, internally striped, to obtain greater efficiency levels and heat exchange. According to the optimised and careful component selection, all the units in the series WFN are compliant with the efficiency limits established by the most recent and up to date directives of the Ecodesign Directive Erp Directive 2009/125/CE. Furthermore, the high-efficiency version (A) is available in place of the standard version (available only for sizes 6703 to 9603), in order to obtain greater performance values at nominal conditions and partial loads, for all sizes.

## THERMOSTATIC EXPANSION VALVE

The series WFN presents a wide operating array, in function of the optional thermostatic valve from the configurator. For both configurations, the selection of the electronic thermostatic valve allows to follow the load with quick response times, especially at partial loads.

### Electronic thermostatic expansion valve (X)

The standard component from the configurator allows to work with produced water, DHW side cooling mode, from 0 °C to +16 °C.

### Double electronic thermostatic for low temperature (Z)

Optionable from configurator, with produced water values from -8.0 °C to +10.0 °C, making the unit coherent for industrial and process applications.

## ACOUSTIC ISOLATION

Different configurations can be selected according to the acoustic isolation necessities dictated by the place of installation and the type of destination, to be configured.

Before showing them, observe how all interventions take place on the compressor compartment, which is the main source of noise:

### Standard without hood (°)

The compressors are assembled on rubber anti-vibration mounts.

### Silenced acoustic hood equipment (L)

The compressors are mounted on plastic rubber anti-vibration mounts inside a soundproofing hood, reduce the sound power level by around 7db(A).

### Extra-silenced acoustic hood equipment (K)

Similar to the silenced version (L), where the hood is characterised by highly absorbing material, with a reduction of sound power around 10 db(A).

## HEAT RECOVERY

Both cold and hot water may be required in most process application, as well as in many tertiary solutions.

The following are the typical application cases:

- Simultaneous production of cold water for system terminals and domestic hot water request;
- Cold water production for hot water production and air treatment plant main coil for post heating coil;
- Process machinery cooling and simultaneous fluid pre-heating in service of other industrial processes.

Therefore, a machine with heat recovery system can be selected for this application; the different options are available from the configurator:

### Without heat recovery (°)

### With desuperheater (D)

This option entails a partial recovery of the condensation heat.

### With total recovery (T)

This option entails the recovery of all the heat otherwise transferred/dissipated to the condenser.

Both configurations (D) and (T) are characterised by a larger refrigerating-water shell and tube heat exchanger, which is added to the shell and tube heat exchanger which acts as a condenser, creating a double water circuit.

For more information, refer to the reference hydraulic diagram.

## CONDENSERLESS UNIT

If coupling WFN with a remote condenser is envisioned, the unit can be configured as condenserless (E).

All the sizes of the series WFN are available in the standard version, with R134A refrigerating gas or alternatively, with refrigerating fluid R513A (XP10), characterised by a GWP reduction and lower environmental impact.

The R513A (XP10) fluid is A1 class, therefore non toxic and non flammable, allows to obtain refrigerating powers equivalent to those obtainable with R134A refrigerant and equivalent operating pressure values, furthermore, it does not require any special technical modification from a components viewpoint.

## CONTROL PCO<sub>s</sub>

Microprocessor adjustment, with keyboard and LCD display, for easy access on the unit is a menu available in several languages.

Adjustment includes complete management of the alarms and their log.

Possibility to control two units in a Master-Slave configuration

The presence of a programmable timer allows functioning time periods and a possible second set-point to be set.

The temperature control takes place with the integral proportional logic, based on the water output temperature.

(1) Only for sizes from 6703 to 9603

(2) Water produced from 0 °C ÷ 16 °C

(3) Water produced from -8 °C up to 10 °C

(4) Not available for the condenserless "E"

(5) The 230V and 500V power supplies are only available for sizes 2502 - 2802

### 3 UNIT COMPONENTS DESCRIPTION

#### REFRIGERANT CIRCUIT

##### Compressors

Compressor with semi-hermetic screw with two rotors.

Oil flow induced by the pressure difference, therefore avoiding the aid of the dedicated pump, studied especially to guarantee a constant and uniform lubrication of the bearings in any compressor work state, both in full and partial load.

Oil separator incorporated with the use of a steel mesh filter that ensures constant presence of oil in the compressor.

Partialisation of the cooling capacity via slide valve which, depending on the position assumed, determines a stepless reduction of the compression chamber, can modulate continuously from 100% to 25% of its capacity.

Each compressor has

- Circuit breaker protection (Fuses) of the motor;
- Discharge temperature and oil level check;
- Electric resistance for heating the sump with compressor at a standstill.

The resistance is powered automatically when the unit stops, as long as it is live.

##### System side heat exchanger

Exchanger, with evaporator function, dry expansion shell and tube type, with pipes side refrigerant passage and case side water passage.

Case side with baffles to increase the turbulence and therefore the efficiency of the heat exchange.

Steel housing with closed cell foam elastomer anti-condensation cladding.

The shell and tube is realised with copper pipes grooved internally to favour heat exchange.

Threaded fittings supplied as standard.

*The heat exchanger is manufactured according to the PED Standard working pressures and resistance to stress. Is supplied with the differential pressure switch.*

##### Source side heat exchanger

Condenser, flooded type shell and tube, with pipes side water passage and case side refrigerant.

Steel case and shell and tube realised with internally and externally grooved copper pipes in order to favour heat exchange.

For units operating in heat pump mode (hydraulic side reversible) the isolation has to be provided for the heat exchanger with (ISG ACCESSORY) closed cell expanded elastomer covering with thickness of 10 mm and heat conductivity equal to 0.033 W/mK a 0°C.

Removable heads so that the tubes can be inspected and cleaned.

The heat exchanger is manufactured respecting the PED Standard respectively working pressures and resistance to stress.

Grooved joints water side connections (with stub pipe supplied for the connection).

##### Dehydrator filter, with replaceable cartridges

Mechanical with cartridge made of ceramics and hygroscopic material, able to withhold impurities and any traces of humidity present in the cooling circuit.

##### Electronic thermostatic expansion valve

The valve modulates the flow of gas to the evaporator in relation to the heat load, to ensure the intake gas is properly heated.

##### Liquid separator

##### (Only for E versions)

Positioned on compressor intake for protection against any return of refrigerant fluid, flooded-start-up and functioning in the presence of liquids.

##### Liquid sight glass with moisture indicator

Used to check the refrigerant gas load and the possible presence of humidity in the cooling circuit.

##### One-way valve

Allows one-way flow of the refrigerant. Positioned on the compressor flow, it prevents inverse rotation of the rotors after stopping.

##### Isolation valves

On the liquid and pressing line, to isolate the refrigerant if requested in the event of extraordinary maintenance.

##### Safety valves for cooling circuit

**On the low pressure branch** the pressure relief valve is fitted with an exchange tap.

This device enables to simultaneously use one pressure relief valve and to exclude the other, providing the option to check or replace a valve while maintaining full system operation.

The pressure relief valve is calibrated at 16 bar.

**In high pressure** the pressure relief valve is fitted with a leaded cut-off tap. The tap allows the valve to be disassembled for replacement or inspection without having to drain the cooling circuit. The tap is supplied with the ball in open position and this position is guaranteed by the sealing. Any intervention to close the tap involves tampering with the seal and must only be carried out by qualified personnel (whoever works on the system is then responsible for returning the tap to the open position and restoring the sealing). The pressure relief valve is calibrated at 22 bar.

#### HYDRAULIC CIRCUIT

##### Water filter (not supplied)

Equipped with steel filtering mesh, it prevents the heat-exchanger from clogging system side due to any impurity inside the circuit.

**Installation is mandatory, contrarily guarantee becomes void.**

##### Differential pressure switch

Checks that water is circulating in the heat exchanger, and stops the unit if this is not the case.

**Supplied in series only on the DHW side exchanger.**

##### Air drain valve

Mounted on the upper part of the DHW side exchanger, it discharges any possible air pockets.

##### Water characteristics

System: Chiller with shell and tube exchanger	
PH	6,8 - 8
Electric conductivity	< 800 µS/cm
Total hardness (CaCO <sub>3</sub> )	< 200 ppm
Total dissolved solids	< 15.000 ppm
Max. solid particles dimension	0,5 mm
Max. glycol amount	50%
Iron (Fe)	< 1 ppm
Copper (Cu)	< 1 ppm
Alkalinity (CaCO <sub>3</sub> )	< 100 ppm
Chloride ions (Cl <sup>-</sup> )	< 150 ppm
Sulphate ions (SO <sub>4</sub> 2-)	< 100 ppm
Sulphide ions (S <sup>-</sup> )	None
Ammonium ions (NH <sub>4</sub> <sup>+</sup> )	< 1 ppm
Silica (SiO <sub>2</sub> )	< 50 ppm
Silica (SiO <sub>2</sub> )	< 30 ppm

*NOTE: Always provide a water filter upstream (inlet) of the heat exchanger. In order to ensure the limits of acceptability of the water, it is recommended to use a filter with N25 mesh (French numbering), mesh size 0.87 mm.*

#### CONTROL AND SAFETY COMPONENTS

##### Double high pressure switch

Calibrated in the factory, placed on the high pressure side of the cooling circuit, it inhibits the functioning of the compressor if abnormal work pressure occurs.

##### Low pressure transducer

Placed on low pressure side of cooling circuit, it signals the work pressure to the control board, generating a pre-warning in case abnormal pressure occurs.

##### High pressure transducer

Placed on the high pressure side of the cooling circuit, signals the work pressure to control board, generating a pre-warning in case abnormal pressure occurs.

## ELECTRIC CONTROL BOARD AND REGULATION

The electric power and control panel, built in conformity to the regulation CEI EN 60204-1: 2018 is complete with:

- Circuit board;
- Transformer for the control circuit;
- door lock main isolating switch;
- Fuses for compressors. Magnet circuit breakers are also available on request;
- Power section;
- Clamps for remote ON/OFF;
- Compressors protection with internal circuit breakers;
- Connection clamps to the remote keyboard;
- Summer-winter manual change-over clamps;
- Clamps for alarm signal;
- Clamps for signalling compressor switch-on status;
- Safety fuses;
- Control circuit numbered cables;
- Imbalance sequence check between the phases.

### Door interlocked isolator

Access to the electrical panel is by operating the handle of the door interlocked isolator which removes power to the unit.

### Electronic controller

The electronic adjustment on WFN chillers is made up of a control board for every compressor connected to each other in a network and a control panel with display. The board that controls compressor n°1 is the "master" board, while the other is the "slave".

Relative to the compressor that controls, transducers, loads and alarms are connected to every board, while only the machine general ones are connected to the master board.

The program and the parameters set are memorised permanently on FLASH memory, allowing them to be kept also in the case of a power cut (without the need for a maintenance battery).

### Microprocessor

- Remote on/off with voltage-free external contact;
- Multi-language menu;
- Phase sequence control;
- Separate control of the individual compressors;
- Amperometric transformer;
- Cumulative faults block signal;
- Historical alarms function;
- Daily/weekly programming;

- Water temperature display;
- Input/output;
- Alarms display;
- Integral proportional regulation on the temperature of the output water;
- Programmable timer function;
- Function with double calibration point linked to an external contact (between double set point);
- Can be interfaced with Modbus protocol (AER485P1 accessory);
- Pump/s control;
- Compressors rotation management;
- Analogue input from 4 to 20 mA;
- "Always Working" function in the case of critical conditions (e.g. an environmental temperature that is too high) the machine does not stop but can adjust itself and supply the maximum power in those conditions;
- "Switching Hysteresis" self-adapting work differential;
- "Switching Hysteresis" to always ensure the correct functioning times of the compressors even in plants with low water content or insufficient flow rates. This system decreases compressor wear;
- PDC "Pull Down Control" system to prevent the activation of power steps when the water temperature quickly approaches the set-point. Optimises machine functioning when working normally and in the presence of load variations, ensuring the best machine efficiency in all conditions.

For further information please refer to the user manual.

## STRUCTURE

### Load-bearing structure

Made of hot-dipped galvanised steel profiles with suitable thickness.

Paint with polyester powders (RAL 9003).

Made in order to allow total accessibility to internal components, for servicing and maintenance operations.

### Standard structure without hood (°)

The compressors are assembled on rubber anti-vibration mounts.

### Silenced acoustic hood equipment (L)

The compressors are mounted on plastic rubber anti-vibration mounts inside a soundproofing hood, reduce the sound power level by around 7db(A).

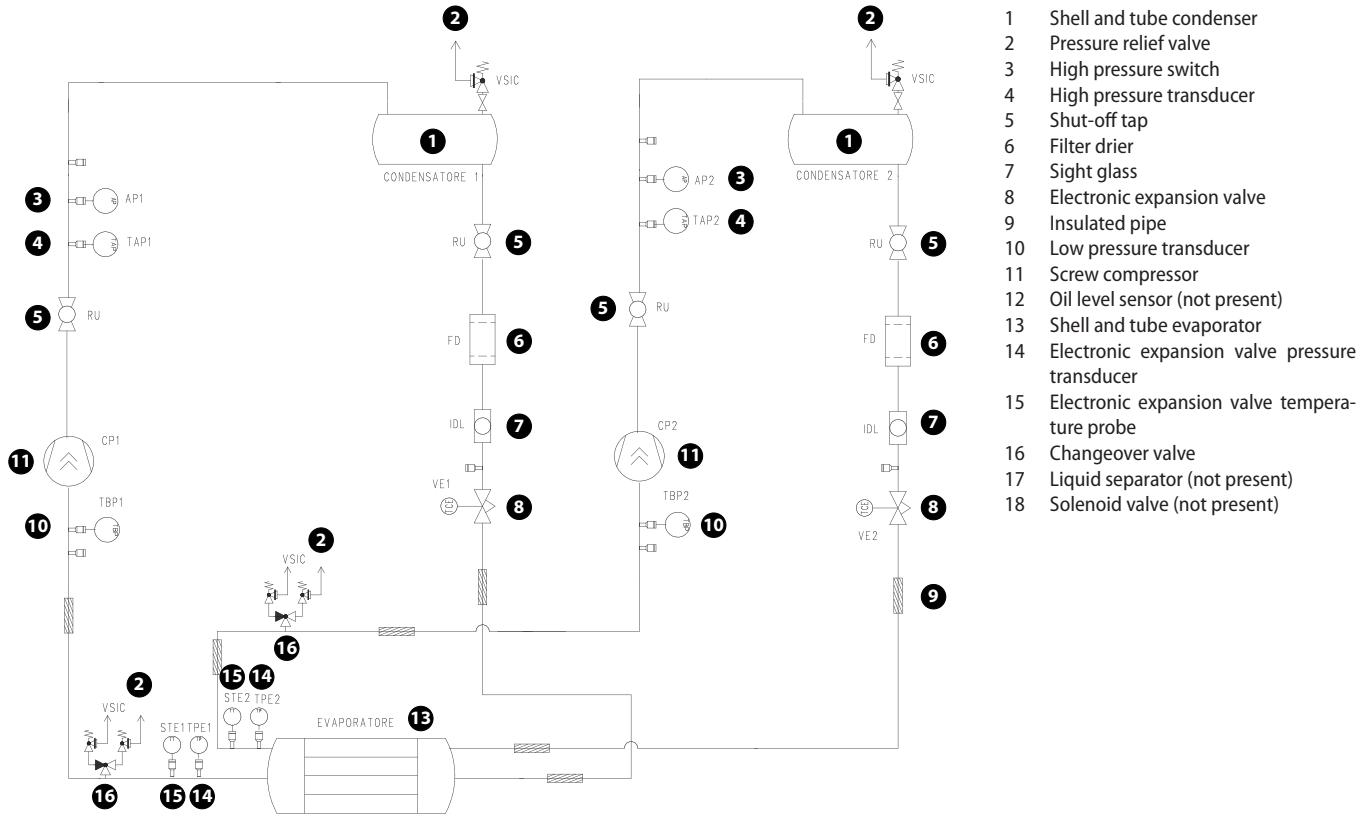

### Extra-silenced acoustic hood equipment (K)

Similar to the silenced version (L), where the hood is characterised by highly absorbing material, with a reduction of sound power around 10 db(A).

## 5 MAIN HYDRAULIC CIRCUITS

### EVAPORATOR

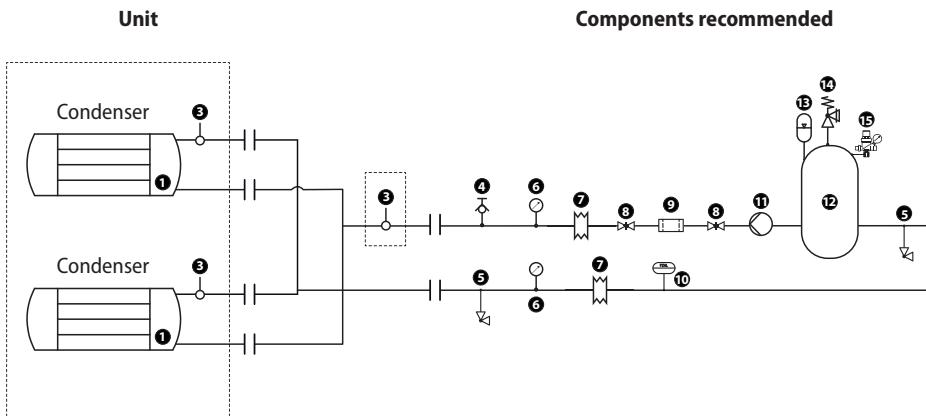

#### EVAPORATOR COMPONENTS AS STANDARD

- 1 Shell and tube heat exchanger
- 2 Differential pressure switch
- 3 Water temperature sensor
- 4 Air drain valve
- 5 Drain valve

#### HYDRAULIC COMPONENTS RECOMMENDED OUTSIDE THE UNIT (AT THE INSTALLER'S RESPONSIBILITY)

- 6 Pressure gauge
- 7 Anti-vibration joints
- 8 Shut-off valve
- 9 Water filter not supplied. **Installation in the immediate vicinity of the heat exchanger is mandatory, penalty waiver of warranty**
- 10 Flow switch not provided. **Installation compulsory for the warranty to be valid**
- 11 Pump
- 12 Storage tank
- 13 Expansion vessel
- 14 Pressure relief valve
- 15 Loading unit

### CONDENSER

#### CONDENSER COMPONENTS AS STANDARD

- 1 Shell and tube heat exchanger
- 2 Differential pressure switch (not supplied)
- 3 Water temperature sensor

#### HYDRAULIC COMPONENTS RECOMMENDED OUTSIDE THE UNIT (AT THE INSTALLER'S RESPONSIBILITY)

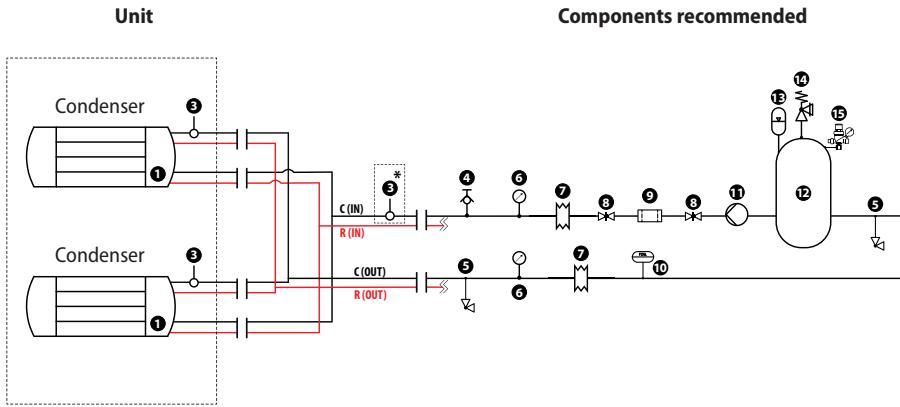

- 4 Air drain valve
- 5 Drain valve
- 6 Pressure gauge
- 7 Anti-vibration joints
- 8 Shut-off valve
- 9 Water filter not supplied. **Installation in the immediate vicinity of the heat exchanger is mandatory, penalty waiver of warranty**
- 10 Flow switch not provided. **Installation compulsory for the warranty to be valid**
- 11 Pump
- 12 Storage tank
- 13 Expansion vessel
- 14 Pressure relief valve
- 15 Loading unit

\* Water temperature probe supplied as standard.

**Note: Joint between exchangers not supplied, charged to the installer.**

**⚠ Intermediate exchangers (suitably sized by the designer) are required upstream of the heat exchangers of the refrigeration unit in all cases where strict compliance with the above limits is not guaranteed or in the presence of dirty/aggressive water. Failure to comply with the above requirement shall invalidate the warranty.**

## CONDENSER WITH PARTIAL OR TOTAL RECOVERY

### CONDENSER COMPONENTS AS STANDARD

- 1 Shell and tube heat exchanger
- 2 Differential pressure switch (not supplied)
- 3 Water temperature sensor

### HYDRAULIC COMPONENTS RECOMMENDED OUTSIDE THE UNIT (AT THE INSTALLER'S RESPONSIBILITY)

- 4 Air drain valve
- 5 Drain valve
- 6 Pressure gauge
- 7 Anti-vibration joints
- 8 Shut-off valve
- 9 Water filter not supplied. **Installation in the immediate vicinity of the heat exchanger is mandatory, penalty waiver of warranty**
- ← 10 Flow switch not provided. **Installation compulsory for the warranty to be valid**
- 11 Pump
- 12 Storage tank
- 13 Expansion vessel
- 14 Pressure relief valve
- 15 Loading unit

\* Water temperature probe supplied as standard.

**Note:** Joint between exchangers not supplied, charged to the installer.

C(IN)	Condenser (IN)
C(OUT)	Condenser (OUT)
R(IN)	Total recovery (IN)
R(OUT)	Total recovery (OUT)

#### System: Chiller with shell and tube exchanger

PH	6,8 - 8
Electric conductivity	< 800 µS/cm
Total hardness (CaCO <sub>3</sub> )	< 200 ppm
Total dissolved solids	< 15.000 ppm
Max. solid particles dimension	0,5 mm
Max. glycol amount	50%
Iron (Fe)	< 1 ppm
Copper (Cu)	< 1 ppm
Alkalinity (CaCO <sub>3</sub> )	< 100 ppm
Chloride ions (Cl-)	< 150 ppm
Sulphate ions (SO <sub>4</sub> 2-)	< 100 ppm
Sulphide ions (S-)	None
Ammonium ions (NH <sub>4</sub> <sup>+</sup> )	< 1 ppm
Silica (SiO <sub>2</sub> )	< 50 ppm
Silica (SiO <sub>2</sub> )	< 30 ppm

**⚠ Intermediate exchangers (suitably sized by the designer) are required upstream of the heat exchangers of the refrigeration unit in all cases where strict compliance with the above limits is not guaranteed or in the presence of dirty/aggressive water. Failure to comply with the above requirement shall invalidate the warranty.**

#### MINIMUM SYSTEM WATER CONTENT

For correct unit operation, there must be a suitable amount of water in the system. A sufficient quantity of water not only ensures machine stability, but also helps avoid a high number of hourly compressor start-ups.

To calculate it, use the formula: Unit rated cooling capacity (kW) x table value (l/kW) = Minimum system content (l).

Size	2502	2802	3202	3602	4202	4802	5602	6402	6703	7203	8403	9603
Minimum system water content	-	-	-	-	-	-	-	-	3,0	3,0	3,0	3,0
Minimum water content for air conditioning	° l/kW	-	-	-	-	-	-	-	3,0	3,0	3,0	3,0
	A l/kW	4,0	4,0	4,0	4,0	4,0	4,0	4,0	3,0	3,0	3,0	3,0

	A l/kW	8,0	8,0	8,0	8,0	8,0	8,0	8,0	6,0	6,0	6,0	6,0

## 6 ACCESSORIES

**AER485P1 x n° 2:** RS-485 interface for supervision systems with MODBUS protocol.

**AER485P1 x n° 3:** RS-485 interface for supervision systems with MODBUS protocol.

**AERNET:** The device allows the control, the management and the remote monitoring of a Chiller with a PC, smartphone or tablet using Cloud connection. AERNET works as Master while every unit connected is configured as Slave (max. 6 unit); also, with a simple click is possible to save a log file with all the connected unit datas in the personal terminal for post analysis.

**MULTICHLILLER\_EVO:** Control, switch-on and switch-off system of the single chillers where multiple units are installed in parallel, always ensuring constant flow rate to the evaporators.

**PRV3:** Allows you to control the chiller at a distance.

**AVX:** Spring anti-vibration supports.

### FACTORY FITTED ACCESSORIES

**RIF:** Power factor correction. Connected in parallel to the motor allowing about 10% reduction of input current.

**ISG:** Insulation kit for condensers. Mandatory accessory for machine functioning in heat pump; standard in units with desuperheater or with heat recovery.

### ACCESSORIES COMPATIBILITY

## 11 MINIMUM TECHNICAL SPACES

With regards to all units, it is essential to respect the minimum distances to avoid:

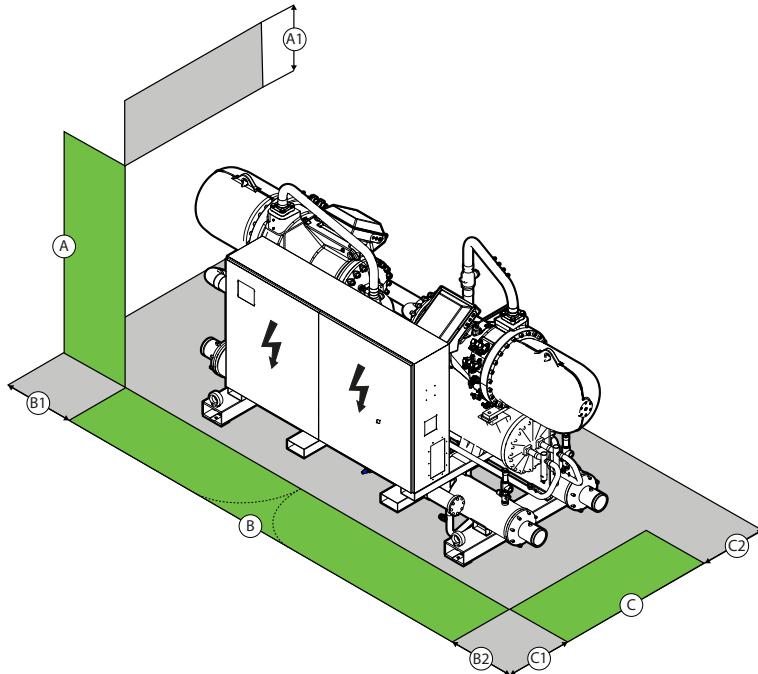

- The generation of hazardous atmospheres in the case of refrigerant gas leaks;

**The place where the unit is installed must be accessible and permitted only to authorised personnel.**

**⚠ It is important that the units are installed flat. The improper installation of the unit invalidates the warranty.**

**⚠ Each side of the unit must have space to allow all routine and extraordinary maintenance to be performed.**

**THE FOLLOWING IMAGES INDICATE THE MINIMUM REQUIRED SPACE:**

### Minimum technical spaces

	WFN
A1	mm
B1	mm
B2	mm
C2	mm
	Electrical box standard
C1 (2502-4802)	mm
C1 (5602-6402)	mm

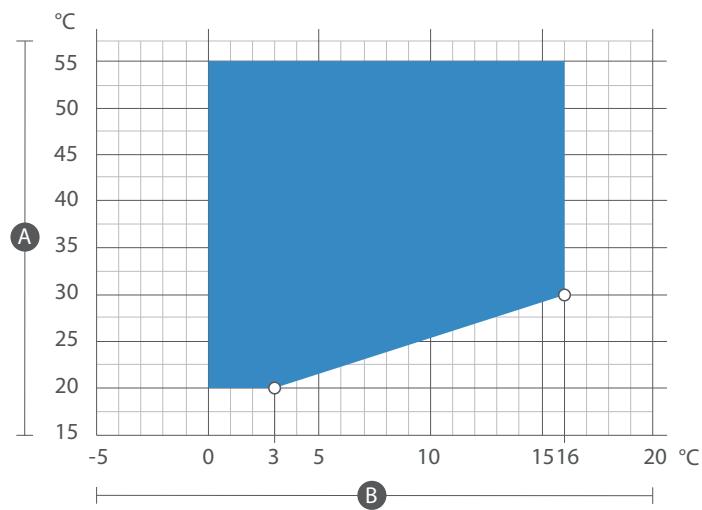

(\*) Technical spaces required for chemical cleaning or cleaning with condenser brushes. These spaces can be reduced to 1000 mm only for chemical cleaning.

## 12 OPERATING LIMITS

The units, in standard configuration, are not suitable for installation in aggressive environments. The values indicated here refer to the min. and max. temperature limits of the unit. For further information, refer to the Magellano selection program available on the website Aermec.

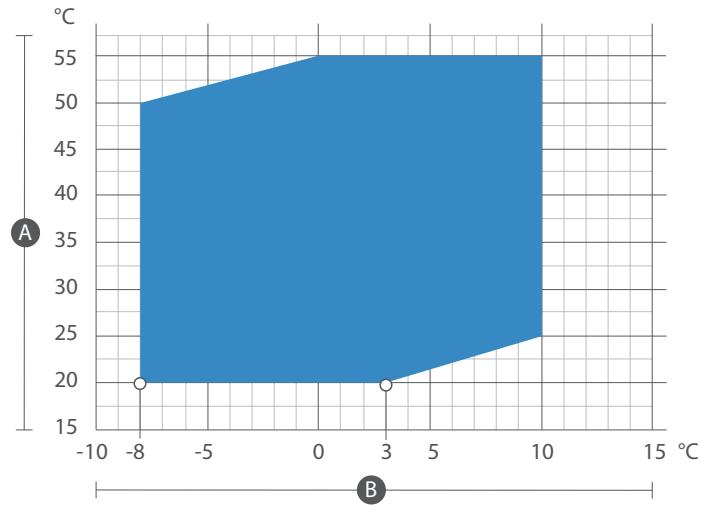

The min and max temperature limits are highlighted in the envelope. It is recommended to consider these temperatures when transporting in containers.

### OPERATION: VALVE X

- A Outlet water temperature - source side (°C)  
 B Outlet water temperature - user side (°C)

### OPERATION: VALVE Z

- A Outlet water temperature - source side (°C)  
 B Outlet water temperature - user side (°C)

**⚠ Attention:** With produced water temperature at  $\leq 4^{\circ}\text{C}$ , it is advisable to provide a percentage of glycol inside the hydraulic circuit in order to avoid damaging the unit.

### PROJECT DATA

Cooling		High pressure side	Low Pressure side
Maximum allowable pressure	bar	22	16
Maximum allowable temperature	°C	120	59
Minimum allowable temperature	°C	10	-10
Technical water		Condensers	Evaporator
Maximum allowable pressure	bar	16	10

With the double electronic low temperature thermostatic expansion valve (Z), the minimum permissible temperature on the low pressure side becomes  $-20^{\circ}\text{C}$ .

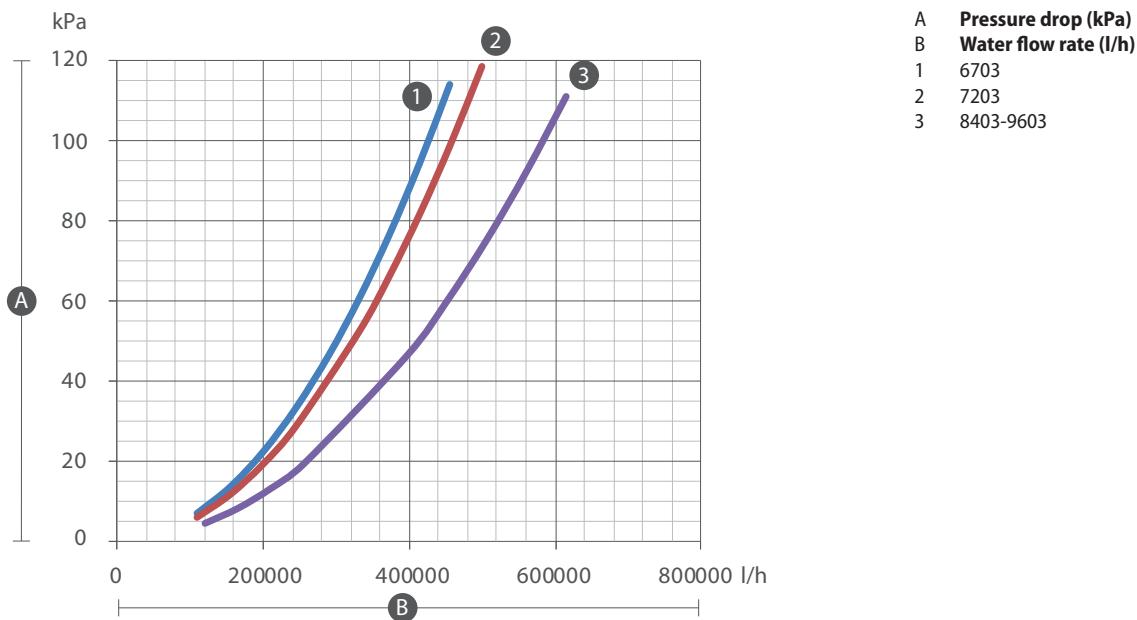

## 13 PRESSURE DROPS

The following graphs show the pressure loss values in kPa according to the flow rate in l/h, the operating field is established by the minimum and maximum value shown in the tables.

## 16 CORRECTION FACTORS

The performance provided in the technical data refer to clean tubes with deposit factor=1.  
For different deposit factor values, multiply the performance data in the table by the coefficients shown.

**ATTENTION:** The yields are calculated with the glycol % and temperature indicated in table, for different yields refer to Magellano.

### CORRECTIVE FACTORS FOR AVERAGE WATER TEMPERATURES DIFFERENT FROM NOMINAL VALUES

The pressure drops are calculated with an average water temperature of 10 °C (Cooling mode), 43 °C (Heating or recovery mode)

Average water temperatures (°C)	System side heat exchanger											
	Cooling mode						Heating mode or recovery					
Average water temperatures	5	10	15	20	30	40	50	23	28	33	38	43

## 17 SOUND DATA

The data refers to units operating in nominal conditions in cooling mode.

The sound power level expressed in dB(A) is measured in accordance with regulation ISO 9614-2 and is the only binding acoustic data.

The sound pressure level expressed in dB(A) is measured in accordance with regulation UNI EN ISO 3744 in respect of the requirements of Eurovent 8/1, and refer to a distance of 10 metres from the external surface of the unit operating in free field with direction factor equal to 2.

(1) Sound power calculated on the basis of measurements made in accordance with UNI EN ISO 9614-2, as required for Eurovent certification. Sound pressure (cold functioning) measured in free field, 10m away from the unit external surface (in compliance with UNI EN ISO 3744).
